Claim Rejections - 35 USC § 102

Page 2

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 1. Claims 1-3 rejected under 35 U.S.C. 102(b) as being anticipated by Froeschke (US Patent No. 4,623,307).

Froeschke 307 teaches a device for extruding flowable substances, and the ability for the device to act like a diffuser, allowing for liquid and viscous materials to flow through (column 1 lines 50-65).

With respect to claims 1-3 Froeschke 307 is comprised of a "nozzle" bar which reads on claimed invention's "diffuser" bar and is formed straight and disposed parallel to the axis of rotation which is comparable to claimed "elongated body" (column 1 lines 46-47). The "nozzle" bar is centered along a groove on the body part of the inner container, where said groove is anticipating said "centering device" and inner container reads on said "bore" of applicant's claimed invention (column 1 lines 47-49).

The use of the applicant's "diffuser-bar" is just a recitation for intended use in pastillation machines.

Art Unit: 1722

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 2. Claims 4-5 rejected under 35 U.S.C. 103(a) as being unpatentable over Froeschke (US Patent No. 4,623,307) in view of Lambert (US Patent No. 3,748,998).

Froeschke 307 does not address the material makeup of the bar.

Application/Control Number: 10/764,907

Art Unit: 1722

Lambert 998 teaches the construction of an "air-bar" from metal for air diffuser systems. It is taught that these types of bars are constructed to withstand high temperatures (column1 lines 7-10 and 23-30).

Therefore it is obvious to one with skill in the art to modify the Froeschke 307 bar with the teachings of Lambert 998 by using metal as the choice of material to construct the bar so that it may be durable and heat-resistant.

3. Claims 6-7 rejected under 35 U.S.C. 103(a) as being unpatentable over Froeschke (US Patent No. 4,623,307) in view of Wark (US Patent No. 6,588,598 B2).

With respect to claims 6-7 Froeschke 307 nozzle bar lacks the "tabs arrangement" of applicant's claimed diffuser bar.

Wark (US Patent 6,588,598 B2) demonstrates the use of tabs on devices containing bars as means of locking and supporting the bars in place (column 4 lines 48-56 and figure 1).

To one with ordinary skill in the art the tabs of Wark are seen as an equivalent to the tabs of claimed invention in helping center the bar in place. It would be obvious to incorporate the tabs into Froeschke's 307 bar,

Application/Control Number: 10/764,907

Page 5

replacing the "centered groove", as an alternative means of providing structural stability for the bar inside the apparatus.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to G. Nagesh Rao whose telephone number is (571) 272-2946. The examiner can normally be reached on 9AM-5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Benjamin Utech can be reached on (571) 272-1137. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
